

METHOD AND SYSTEM FOR SERVER MANAGEMENT PLATFORM INSTRUMENTATION

ABSTRACT OF THE DISCLOSURE

A method and system for managing a server using remote intelligent mail messages is presented. An electronic mail message sent by a user is received by a mail agent. The message requests a service relevant to a server. The e-mail message is deciphered to understand the nature of the service requested by the user. If the user has the required access privilege, then the mail agent performs the service to produce a service outcome.
